ARPIT TRIVEDI

Backend Developer | Node.js · MongoDB · Redis · System Design
Indore, India · +91 8770942365 · arpittrivedi099@gmail.com · linkedin.com/in/arpit-trivedi

PROFESSIONAL SUMMARY

Backend Developer with production experience designing and shipping scalable REST APIs, real-time systems, and cloud-integrated platforms on Node.js, Express.js, MongoDB, and Redis. Cut API response times by 30% through query and indexing optimization at NetDev, and independently architected five full-stack systems spanning video streaming, real-time messaging, and AI-powered APIs. Strong foundation in system design, authentication, and performance tuning; 400+ LeetCode problems solved.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, C/C++
Backend: Node.js, Express.js, REST API Design, WebSockets, Socket.io
Databases: MongoDB (Aggregation, Indexing), MySQL, Redis
Frontend: React.js, Next.js, Redux, Vite, Material-UI
Cloud & DevOps: AWS S3, Vercel, Cloudinary, Docker, Git, Postman
Core Concepts: System Design, JWT Auth, RBAC, Caching, Job Queues, HLS Streaming

EXPERIENCE

Backend Developer | *NetDev Pvt. Ltd.* **Aug 2025 – Dec 2025**
Indore, India · Internship

- Designed and built the backend for QRMenu, a QR-code restaurant ordering system supporting real-time menu access and full order-lifecycle management for concurrent customer sessions.
- Built RESTful APIs for menu CRUD operations and order processing using Node.js, Express.js, and MongoDB.
- Cut average API response time by 30% through MongoDB query optimization, indexing strategy, and payload compression.
- Implemented rate limiting, request validation, and centralized error handling, improving API reliability under concurrent load.

Backend Developer | *Nava Juni (Startup Prototype)* **Jan 2026 – May 2026**
Remote

- Architected RESTful news-delivery APIs for a Gujarati short-news platform, covering article ingestion, categorization, and multi-stage publishing workflows.
- Designed MongoDB schemas supporting tagging, category trees, and multi-author publishing.
- Built the backend for an editorial admin dashboard with role-based access control (RBAC) for scheduling and updating articles.

KEY PROJECTS

StreamVault — Adaptive Video Upload & Streaming Platform — *Node.js, FFmpeg, AWS S3, Redis, MongoDB, HLS*

- Engineered automatic 360p/720p/1080p transcoding with multipart uploads and failure recovery.
- Built Redis-backed background job processing and secure content delivery via presigned S3 URLs.

DocuMind AI — RAG-Powered Document Q&A Agent (Live Demo) — *Node.js, OpenAI API, LangChain, Redis, MongoDB, WebSockets*

- Built an agentic RAG backend that ingests PDFs/docs, chunks and embeds them into a vector store, and answers queries with cited, hallucination-checked responses.
- Designed a multi-step LLM agent (tool-calling, retrieval, re-ranking, self-critique loop) orchestrated with LangChain.
- Implemented streaming responses over WebSockets and per-user conversation memory in Redis with MongoDB-backed persistence; deployed live with public API docs, achieving sub-2s query turnaround on cached embeddings.

NexChat — Real-Time Messaging Engine — *Node.js, Socket.io, JWT, MongoDB, Redis*

- Implemented persistent rooms, presence tracking, and JWT auth with refresh-token rotation.
- Used Redis Pub/Sub for horizontal scaling, with cursor-based pagination and read receipts.

Renify — Vehicle Rental Booking System (MERN) — *MongoDB, Express.js, React, Node.js*

- Built availability management, booking-state transitions, and conflict-prevention logic with RBAC and audit logging.

EDUCATION

B.Tech, Computer Science Engineering **2021 – 2025**
Sushila Devi Bansal Institute of Technology, Indore · CGPA: 6.7

ACHIEVEMENTS & ACTIVITIES

- Solved 400+ DSA problems on LeetCode — strong grounding in algorithms, trees, graphs, and dynamic programming.
- Winner, college-level hackathon — designed and deployed a full-stack solution in 24 hours.
- Runs a YouTube channel covering DSA problem-solving and backend web development concepts.
- Self-taught HLS streaming, FFmpeg transcoding, and AWS S3 multipart uploads through independent project work.
